Detailed Action

Response to Appeal Brief

The Appeal brief filed on 3/15/10 has been considered and dismissed. The previous rejection has been withdrawn. Claims 29-41, 43-54, 59 and 60 remain pending.

Allowable Subject Matter

Claims 29-41, 43-54, 59 and 60 are allowed over the prior art of record.

The following is an examiner's statement of reason for allowance:

For independent claims 29 and 60, the closest prior art of Levinson (US 5152870) teaches "An incandescence emitter for incandescence light sources, comprising an emitter body (F) to be brought to incandescence at an operating temperature by means of passage of electric current, the emitter body (F) extending between two electrodes (H), wherein on at least one surface of the emitter body (F) a micro-structure (R) is provided, operative to enhance absorbance for wavelengths belonging to the visible region of the spectrum.

However, regarding independent claims 29 and 60, the prior art of record neither shows nor suggests "An incandescence emitter for incandescence light sources wherein - said micro-structure (R) is at least partly made of a first material (Au) whose melting temperature is lower than the operating temperature of the emitter body (F)- said electrodes (H) are made of a second material having

Art Unit: 2889

a high melting point, such as tungsten, -at least a substantial portion of the emitter body (F), including said micro-structure (R), is coated with a coating layer (OR) made of an oxide with high melting point, such as a refractory oxide, said oxide being configured to preserve a profile of said microstructure (R) in case of melting of the first material (Au), consequent to the use of the emitter body (F) at an operating temperature exceeding the melting temperature of said first material (Au)(for claim 60), and wherein at least one of said emitter body (F), said electrodes (H) and further said coating layer (OR) includes one throat or cavity (G) being open on the first material (Au) for receiving part of said first material (Au) in case of melting thereof (for claim 29).

Claims 29-50, 54 are allowed being dependent on allowed base claim.

:

For independent claim 51, the closest prior art of Levinson (US 5152870) teaches "A method for constructing an incandescence light emitter to be brought to incandescence by passage of electric current, comprising the steps of:

a) obtaining a filiform or laminar emitter body (F) to be brought to incandescence at an operating temperature by means of passage of electric current, the emitter body (F) being formed to have on at least one surface thereof a micro-structure (R) operative to enhance absorbance for wavelengths belonging to the visible region of the spectrum.

Art Unit: 2889

However, regarding independent claim 51, the prior art of record neither shows nor suggests "An incandescence emitter for incandescence light sources wherein – "said micro-structure (R) being at least partly made of a first material (Au) whose melting temperature is lower than the operating temperature of the emitter body (F), b) obtaining a first and a second electrode (H), said electrodes (H) being made of a second material having a high melting point, such as tungsten, c) connecting each electrode (H) to the emitter body (F), and d) coating the emitter body (F) in which the anti-reflection micro-structure (R) has been formed with a coating layer (OR) of refractory oxide, said coating layer (OR) being operative to preserve a profile of said microstructure (R) in case of melting of the material (Au) thereof, consequent to the use of the emitter (F) at an operating temperature exceeding the melting temperature of said material (Au), the method including forming in at least one of said emitter body (F), said electrodes (H) and said coating layer (OR) one throat or cavity (G) open on the first material (Au).

Claims 52-53 and 59 are allowed being dependent on allowed base claim.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
